Libraries are an ever-evolving institution, and librarians have a need to keep up with the changes that arrive in their libraries. Some of these changes are the ever-evolving need of librarians having skills in computer literacy, this can include having to manage your libraries very own website. Having personally learned some the skills necessary to operate a website at minimal capacity, I believe it necessary that having knowledge on how websites operate and how they should be maintained be crucial for librarians.

The different languages we learned all have their own benefits, HTML being the most crucial of them to have a basic to moderate understanding, as for CSS it is necessary to have some basic understanding to allow for a better user experience on your webpage.
